

Professional Overview

Mathematics and Computing undergraduate with a solid foundation in software development, machine learning, and data structures. Skilled in creating full-stack web applications utilizing React.js, Node.js, and MongoDB, as well as developing AI-driven solutions with Python and various machine learning libraries. Experienced in designing scalable applications, creating REST APIs, deploying cloud-based solutions, and leveraging mathematical problem-solving for real-world engineering challenges. Enthusiastic about software engineering, system design, and crafting efficient, user-centered applications.

Education

M S Ramaiah University of Applied Science (MSRUAS) – Bengaluru, Karnataka

Bachelor of Technology in Mathematics and Computing (Expected 2027) | Current CGPA : 9.36

SKCH (Kumaran's) PU College – Bengaluru, Karnataka

Pre-University Course (12th Grade) | 2020 – 2022 | Percentage : 90%

Technical Skills

- Programming Languages: Python, Java, C++, JavaScript
- Web Development: React.js, Node.js, HTML5, CSS3, REST APIs
- Databases: MongoDB Atlas
- Machine Learning & Data Science: Scikit-learn, XGBoost, Pandas, NumPy, Matplotlib
- Tools & Platforms: Git, GitHub, MATLAB, Power BI, Streamlit, Google Colab, Render, Vercel
- Core Computer Science: Object-Oriented Programming (OOP), Data Structures, Algorithms, Database Management Systems (DBMS)
- Mathematics: Probability & Statistics, Linear Algebra, Numerical Analysis, Optimization

TECHNICAL PROJECTS

Toll Management & Billing System | React.js, Node.js, MongoDB Atlas, Render

- Developed a MERN-based toll management application for vehicle records, billing, and transaction tracking.
- Built REST APIs with Node.js and integrated MongoDB Atlas for database operations.
- Deployed the application on Render with responsive React.js frontend components.

AI Generative Fashion Studio | Python, Streamlit, Generative AI APIs

- Created an AI-powered application that generates fashion designs from user prompts.
- Integrated Generative AI APIs with Streamlit for interactive design generation and visualization.

Planetary Helioscope & Seismic Risk Predictor | Python, XGBoost, Streamlit

- Developed a machine learning dashboard for environmental risk prediction using multi-source parameters.
- Implemented data preprocessing, model training, and interactive visualization pipelines.

Internships & experience

AI & Front End Development & Power BI Intern | Edunet Foundation (In Collaboration with IBM, Shell & Microsoft Elevate)

Remote | May 2025 – July 2025 | Aug 2025 - Sept 2025 | Feb 2026 - Mar 2026

- Developed data analysis workflows and machine learning models using Python and Google Colab.
- Created interactive Power BI dashboards for data visualization and business insights.
- Collaborated on AI-based solutions by documenting workflows, model performance, and implementation processes.

Cyber Security & Data Analysis Intern | Edunet Foundation (VIOS Platform) | Remote | Oct 2025 – Jan 2026

- Analyzed network security datasets using Python and pre-trained machine learning models.
- Processed system logs and generated data-driven insights for identifying potential security anomalies.
- Built analytical dashboards to visualize cybersecurity metrics and vulnerability patterns.

AI for Sustainability & Green Intern | 1M1B Foundation | Remote | Dec 2025 – Jan 2026 | Feb 2026 - Mar 2026

- Applied data analysis and predictive modeling concepts to sustainability-focused datasets.
- Developed analytical approaches for optimizing resource usage and evaluating environmental impact.

RESEARCH EXPERIENCE

Mathematical Modeling of Fractional-Order Vitiligo Dynamics | MATLAB, Nonlinear Analysis

- Developed a fractional-order differential equation model to study cellular-level disease progression dynamics.
- Performed equilibrium analysis, Jacobian-based stability evaluation, and numerical simulations using MATLAB.
- Implemented computational methods to validate analytical results; manuscript completed and under institutional review for journal submission.
